

## HTSX Runtime Engine

Edit blockchain components using HTSX:

HTSX Code

```
<htsx>
  <wallet-connector
chains="hybrid,base,polygon
,solana" required="true" />
  <nft-license
type="node_license"
storage="true"
validator="false" />
  <cross-chain-bridge
protocol="axelar"
chains="hybrid,base,polygon
"/>
  <node-operator
type="storage" naas="true"
rewards="auto" />
  <hybrid-token
```

 Parse & Execute HTSX

## Advanced Web3 Integrations

**Polygon  
AggLayer**

### Unified Liquidity Layer

- Cross-chain liquidity aggregation
- Unified settlement on Ethereum
- 50M HYBRID total liquidity
- 8.5% yield across chains

**Coinbase  
AgentKit**

### AI-Powered Operations

- Autonomous node management
- Smart delegation strategies
- Gasless transactions (Paymaster)
- Fiat onramp integration

**OnRamp  
Integration**

### Fiat to HYBRID

- Buy HYBRID with USD/EUR
- Apple Pay, Google Pay support
- Instant settlement
- \$10 per HYBRID
